

For this time we asked our 5th graders to do some project work about rivers in Europe.

- First we checked again on a big map where our partner countries are:

- Then we asked the children to form groups and choose one of the river ID cards. While reading the text they could use their small maps.
- While they were working on the rivers they were asked to fill in the European River Grid

- Then we asked them to talk about the river they had and share the information with the other groups. So each group got the information about the other rivers as well.

- At the end we put all ID cards on the board so as to have a look at all the rivers at the same time.

- While working on the materials we, as teachers were happy to see how creatively our pupils were using the language.
