

Text for Listening with Key-words

Habitat is the place where living things live.

Habitats vary in climate, soil, terrain and the plants that grow there.

Desert climate is hot and dry all year. The soil is poor and there are only a few plants.

Grassland climate has only two seasons: a hot season and a rainy season. The soil is fertile and there is tall grass.

Rainforest climate is warm and wet. It rains a lot all the year round. There are many tall trees and millions of different plants. These are important for giving the Earth oxygen.

Polar climate is very cold and windy all the year round. There is permafrost which means the soil is permanently frozen. There are long periods of darkness in winter and light in summer.

HABITAT	PLACE	LIVING THINGS	VARY
CLIMATE	PLANTS	SOIL	DESERT CLIMATE
HOT AND DRY	FEW PLANTS	GRASSLAND CLIMATE	HOT SEASON
RAINY SEASON	TALL GRASS	RAINFOREST CLIMATE	WARM AND WET
MILLIONS OF DIFFERENT PLANTS	OXYGEN	POLAR CLIMATE	COLD AND WINDY
DARKNESS	WINTER	LIGHT	SUMMER
