

The Olt river in Romania

The Olt is 615 km long.

It is one of the most important rivers in Romania.

The source of the river is in Hasmasu Mare Mountains, which are in our county - Harghita.

It follows a complex route.

There are almost 30 lakes on the river Olt.

It crosses 7 county and flows in Danube river.

It crosses 5 from bigger cities in Romania.

The river has flooded many times and it has produced damages.

There are many species of fish in the Olt river: catfish, carp, pike, trout, crucian.

It offers excellent conditions for rafting.
